

Accumulation Solutions

Nercon's conveyor accumulation loop is designed as a buffer zone for upstream or downstream production efficiencies. The accumulation loop allows the upstream and downstream applications to work independently of each other creating a helpful buffer zone between processes that require different lengths of time to complete preventing congestion.

With minimum back pressure, the accumulation loop is ideal for a large volume of rigid items that share the same weight and dimensions minimizing damage on products.

FEATURES

- Smooth combining
- Gentle on products
- Modular design
- Adjustable divert arm
- Low maintenance requirements

INDUSTRY SEGMENTS

- Snack Food & Bakery
- Packaged Foods
- Beverage
- Confectionery & Candy
- Dairy Food
- Health & Beauty
- Household Cleaning Products
- Pharmaceuticals

APPLICATION TYPES

- Bottles
- Bowls
- Canisters
- Cans
- Cups
- Jars
- Rounded Trays

Dynamic Transfer Section vs Dead Plate

A solution for Nercon conveyor turns, the Dynamic Transfer Section allows manufacturers to make tighter turns in a smaller floor space. Capable of handling a variety of product sizes, types, and

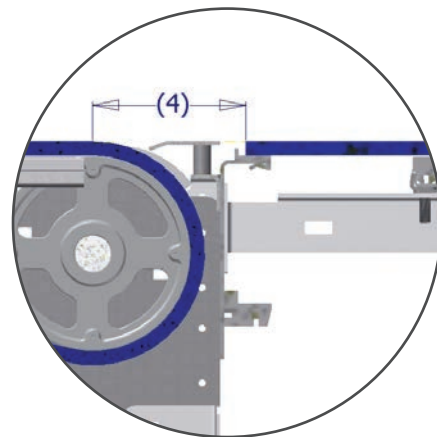

shapes, the dynamic transfer section features a smooth, live transfer without the use of a dead plate, keeping even the last products moving and ensuring product stability and integrity.
